HacktheDex

## Report 20180918A

### Type

Cross-site scripting (XSS) code injection

### Description

TradingView has an XSS 0-day vulnerability that bypasses defense mechanisms such as Cloudflare. User must use an external link that contains the malicious code to allow the code injections.

### Review

OWASP Rating	
Likelihood	Low
Impact	High
Severity	Medium

Possible attack vector: Recognize password input / unlocking of the local wallet and broadcast malicious transactions or collect private keys.

Reviewers: Peter Conrad, abit, Fabian Schuh, Stefan Schießl

### Resolution

Alerted HackTheDex subscribers on 21th September of 2018, TradingView has been notified as well. Fixed by [adjusting the TradingView binaries](#).

### Reward Consensus

Reward	6,333 bitUSD
