HacktheDex

## Report 20190103

### Type

Impersonation

### Description

Any Wiki page can be edited by any logged in user in the system. This poses security and reputation risk for the company. A malicious actor can accurately craft a message or a note which would lead a user to download a malicious component in a natural way. The user might trust the code, so it might extrapolate that trust to the wiki and consider it being safe.

### Review

OWASP Rating	
Likelihood	Low
Impact	Medium
Severity	Low

Possible attack vector: Broadcast a transaction that causes a blockchain halt.

Reviewers: Ryan Fox, Peter Conrad, John Jones

### Resolution

Wiki restricted to collaborators.

### Reward Consensus

Reward	333 bitUSD
